Geographers are professionals who focus upon the spatial dimensions of human societies and earth’s environment. Geography is a discipline that offers insights about past, present and future issues involving natural resources, culture, economics and politics.

The undergraduate program provides a broad liberal arts education in physical, human and regional geography, combined with courses in geographic information science (remote sensing, GIS and cartography), research and writing skills, and quantitative methods. The program prepares students for positions in government and industry, and also for graduate work in geography or related fields.

Make an appointment with one of our faculty advisers to learn more about our geography major.
